

VAKSIMUNE® IB QX

Minimum Reaction, Maximum Protection

VAKSIMUNE® IB QX

Vaksimune® IB QX is a live vaccine of attenuated Infectious Bronchitis QX strain, suitable and effective for broiler and layer. Infectious bronchitis virus (IBV) QX is the most common variant circulating and causes clinical symptoms. IB QX has higher pathogenicity than strain M41. Therefore, the use of the IB QX virus strain that is appropriate to the conditions is very necessary.

INDICATION

Vaksimune® IB QX is used to protect chickens against IB QX Strain, with the benefit of:

- Early protection
- Use in hatcheries provides more precise and economical vaccination results
- Precise protection against IB QX challenges
- More protection in the upper respiratory tract

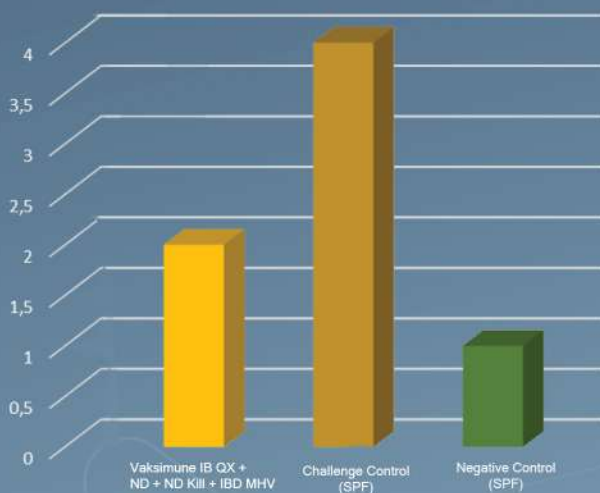

COMPOSITION

Each dose contains at least $10^{3.0} \text{EID}_{50}$ Infectious Bronchitis virus BVN 009 strain

ADMINISTRATION & DOSAGE

Vaksimune® IB QX is applied by eye drops or sprays

Cilliosstasis Scoring of IB QX Live Attenuated Vaccine on Hatchery Vaccination Program in Broiler Against Indonesian IB QX-like Virus

Cilliosstasis Scoring :

- Skor 0 : Cillia intact & motil
- Skor 1 : Cillia 75% - 100% intact & motil
- Skor 2 : Cillia 50% - 75% intact & motil
- Skor 3 : Cillia 25% - 50% intact & motil
- Skor 4 : Cillia < 25% & non motil

Vaksimune® IB QX

for better upper respiratory tract protection against IBV infection.
